

Ugo Marani, edited by, The Economics Of The Unified Germany: An Interested Look From Southern Italy

Napoli 2006, Novus Campus

Germany's reunification is an extraordinarily relevant event for having contributed to a new paradigm of regional development policies in Europe. For Italy the interest is still greater. The book, containing various essays, focuses on the economic policies for the Eastern Länder to assess, first, whether the German proposals may be easily replicated, and secondly, whether the lack of economic convergence of Italy's southern regions could be avoided. The authors are convinced that the strategies of Germany's regional policies are to be taken as a reference point to understand the failure of government policies in the South of Italy.
